

Cascade President and CEO Leaves Behind a Legacy

04 Jun 2015 Posted by Tamara Belgard 0 Comment

Cascade announces that effective June 15th, Robert Warren Jr. will be retiring from his position as President and CEO of Cascade Corporation. Warren will continue to remain active in the company, serving as an ambassador for Cascade along with his new role as elected Chairman of the Board.

The Board has named Andy Anderson, previously Cascade's Executive Vice President, as Warren's successor.

Anderson brings 43 years of Cascade experience to his new position as President and CEO. In addition to Anderson's longevity with the company, and his proven dedication, he offers a shared vision of maintaining Cascade's commitment to exceeding customer expectations at every level. Warren says, "Andy's values are an integral part of what built Cascade, and as the new leader, he will continue to ensure the company's growth and success well into the future."

Cascade has a long and rich history of achievement. Warren's father, Bob Warren, Sr., started the company in 1943 in a small machine shop in Portland, Oregon with just four employees. Warren Sr. believed that a successful company has both satisfied customers and satisfied employees, and he worked to build a company that embraced that culture. Now, with over 2,000 employees, in 19 different countries, Warren Jr. retires knowing how he and his father not only built a legacy, but helped shape the entire global material handling industry.

Warren's underlying philosophy is, "If we're not moving ahead, we are falling behind." He says the Board is confident that under Anderson's leadership, the company will move ahead into a bright and robust future and he looks forward to continuing his contributions toward those efforts.

About Cascade Corporation:

Cascade Corporation was established in Portland, Ore. in 1943 and is the global leader in the design, manufacture and marketing of material handling and construction equipment and related technologies. Cascade's unmatched service, support and expertise, combined with their advanced damage reduction technologies, flexible manufacturing, short lead times and quality products, strengthen the company's position as the premier supplier to the material handling industry.
