Pasaban manufactures two new paper sheeters for the Naini Group paper mill

Mr. Pawan Agarwal, Managing Director of the [Naini Group](#) and Chairman of the Indian Pulp and Paper Technical Association (IPPTA) has once again chosen [Pasaban sheeters](#) to meet his objective of providing a quality finish to the paper produced in the company's two plants; Naini Tissues and Naini Papers.

Naini Group belongs to the medium-size pulp and paper manufacturing sector. Four years ago it hired Pasaban to design and manufacture a paper sheeting equipment in order to provide a higher quality finish to the paper it produces. The good results achieved were key to the manufacture and commissioning of two more high output sheeters.

To the 8 unwind stand *KB 2400* sheeter, another [KB 1900](#) was added. Including an automatic pallet change at maximum speed and a 6 unwind stand [Compact CX145](#) sheeter with low speed pallet change without sheet reject. Those machines are to be the perfect complement to the first KB.

As for the type of paper, the sheet cutting machines are designed for sheeting 70 and 80 g/m² light-weight printing and writing papers.

Mr Agarwal describes his experience with Pasaban with these words in an article for the Papermart magazine:

[...] Naini then shifted its focus to finishing paper. It installed a Synchro Fly Sheeter from Pasaban in 2014 for giving a quality finish to the paper it produced.

“We felt sheeting was not as per the market requirement and there were certain wastages at the end of the end-consumers. All this was because of not so good quality of sheeting. Installation of Pasaban sheeter again was an instant hit and we got very good new customers. So, that was again a turning point for us”.

Pasaban is committed to providing customers with customised products that contribute to positioning their companies as a benchmark for quality and as market leaders.
