

ROLL COVERINGS

RUBBER COVERINGS

Our range of rubber coverings enable to cover most of the positions installed in a paper machine, from guiding rolls to more demanding applications like press rolls in the wet-end, rolls in the coating and size press units and the pressure rolls working against the Yankee cylinder in tissue production.

The integration with the other activities offered by RIF completes our capabilities in this business sector.

The rubber covering service is provided by **RIF ROLL COVER SRL**, a joint venture company between RIF SPA and **VOITH PAPER**.

The maximum roll sizes we can handle are :

Maximum outside diameter of the covered roll	mm	1800
Total length of roll (journals included)	mm	13500
Max weight	tons	40

FIBROUS REFILLINGS

In spite of the increasing use of composite covers in supercalendering , the traditional paper refillings still show exclusive features which make them the best choice for several paper grades.

We can supply refillings with special fibrous materials (i.e. with a variable content of cotton , wool or linen) of supercalender bowls or embossing rolls.

Upon demand we can also manufacture the new metal shafts for the calender bowls availing of good quality steel adequately treated and machined.

The maximum working capacities are :

Maximum roll diameter	mm	900
Maximum face length	mm	9000
Maximum weight	tons	28
